

## ZERO TABLE

---

**DESIGNER:**

Márk Cselovszki

**STRUCTURE:**

Engineered turkey oak wood top with wood turned burnt beech legs.

**FINISH:**

Reactive stain (reacts the tannins and sugars in the wood) - pigmented oiled on top side, matte lacquered.

**DIMENSIONS:**

160 x 100 x 45 cm

---

"This contemporary design coffee table is a beautiful and functional piece of furniture that embodies the perfect blend of natural and modern elements. The table top is crafted from the rich and textured wood of a Turkey Oak tree, providing a warm and inviting surface that is both durable and beautiful. The legs of the table are made from Burned Beech spheres, which add a unique and striking visual contrast to the natural, earthy tones of the oak top. The combination of these two natural materials creates a stunningly harmonious and organic aesthetic that will enhance any living space. The table's simple and elegant forms make it a versatile piece that can be used in a variety of interior design styles. Its compact size makes it an ideal addition to any living room, family room, or den, while the durable construction ensures that it will provide years of reliable use. Whether used to display art books or as a surface for drinks and snacks, this contemporary design coffee table is a gorgeous and functional piece that will elevate any home decor."

## CARE AND MAINTENANCE OF LEATHER

We use fine leathers that have undergone processes that do not alter the original appearance and unique character of the leather. Marks, veins and differences in the grain, thickness and color are a guarantee of the authenticity and natural quality of the hide. For everyday cleaning, simply wipe the surface with a clean, dry, non-abrasive, preferably white cloth. Dry dirt can be easily removed with the use of a soft bristle brush. You can also use a medium power vacuum cleaner with a suitable attachment and avoid rubbing the surface with it. Any stains caused from water soluble substances (soft drinks, coffee, tea, milk, chocolate, oil, grease, make-up) should be removed quickly by gently dabbing the surface with a dry cloth or paper towel. Next you will need to lightly rub the stain from the outside towards the center using a clean cloth soaked in a neutral pH, colorless detergent diluted in water. Try not to soak the leather, which must be dried quickly with a clean cloth. Do not use a hairdryer and avoid exposing to direct sunlight. Greasy substances (oil, ketchup, mayonnaise, chocolate) can instead be carefully removed with a paper towel without pressing on the surface, so as to prevent the stain from being absorbed by the leather. Gently rub the stain from the outside towards the center using a clean cloth soaked in a neutral pH, colorless detergent, well diluted in water. Without soaking the leather, dry immediately with a clean, dry cloth.

### CAUTION

Do not place leather furniture or sofas near any source of heat such as fireplaces, stoves or radiators. The minimum distance must be 50cm. The upholstery will maintain its original color by avoiding placing the sofa in direct sunlight or near artificial light sources, especially halogen lights. In fact both artificial light and sunlight can permanently damage leather upholstery, as can unsuitable detergents. Natural leather upholstery makes each sofa a unique piece because every hide is one of a kind.

## CARE AND MAINTENANCE OF MARBLE

Marble is crystalline limestone rock composed primarily of calcium carbonate. As a natural material, color variations, whether overall or in the veins and marks even within the same slab, are considered characteristic. The product may change by itself, acquiring an appearance that makes it all the more prized and unique the more it shows signs of age. Over time, such surfaces may deteriorate and/or mark (marks bring more noticeable with a pale color). It is therefore advisable to avoid leaving cleaning products or household liquids (oil, red wine, vinegar, etc.) on the surface. In particular, products that contain citric acid (present for example in fruit, citrus fruit and tomatoes) act on contact with the treated surface, removing its original sheen. Always clean stains on surfaces while they are still fresh. For routine maintenance use a microfiber cloth with a neutral pH detergent (water alone is enough for flamed finishes). Do not use products containing acids or limescale removing substances.

## CARE AND MAINTENANCE OF WOOD

The woods used for our products are of the highest quality and manufactured with the greatest craftsmanship. As wood is a natural material, when placed in a very dry environment it loses humidity and consequently shrinks. In contrast, in a very humid environment wood acquires humidity, increasing in size. These subtle reactions are not flaws but natural movements of a 'living' product, which expands and contracts as the seasons change. Furthermore, the final moisture content of wood also varies according to use, for which particular care is required. Please keep the product within advised humidity range (45-55%) and temperature (20-22 °C). For routine maintenance of wood, use a soft, damp, fluffy cloth, or a microfiber cloth. Stubborn stains cleaning wood and does not scratch. To thoroughly clean even the finest grain, follow the direction of the grain using a neutral pH detergent. Next, rinse with a well wrung out cloth and thoroughly dry all surfaces. It is advisable to use neutral products and to always test any product on a small hidden part of the object before using it on the outside.

## CARE AND MAINTENANCE OF STEEL MESH TWEED PATTERN

Avoid leaving household liquids (oil, red wine, vinegar, etc.) on the surface. In particular, products that contain citric acid (present for example in fruit, citrus fruit and tomatoes) act on contact with the treated surface, removing its original sheen. Always clean stains on surfaces while they are still fresh. For routine maintenance use a microfiber cloth with a neutral pH detergent for glass (alcohol free). Do not use products containing acids or limescale removing substances.

## CARE AND MAINTENANCE OF BRASS AND IRON

Avoid leaving household liquids (oil, red wine, vinegar, etc.) on the surface. In particular, products that contain citric acid (present for example in fruit, citrus fruit and tomatoes) act on contact with the treated surface, removing its original sheen. Always clean stains while they are still fresh. For routine maintenance use a microfiber cloth and water. Do not use products containing acids, limescale removing substances or alcohol.
